

# LabLink Network

Science brings us together - our platform makes it possible.

# Who we are?

**On Lablink Network we connect global professionals, fostering collaboration on interdisciplinary research projects, creating a worldwide impact**

# Why we need this?

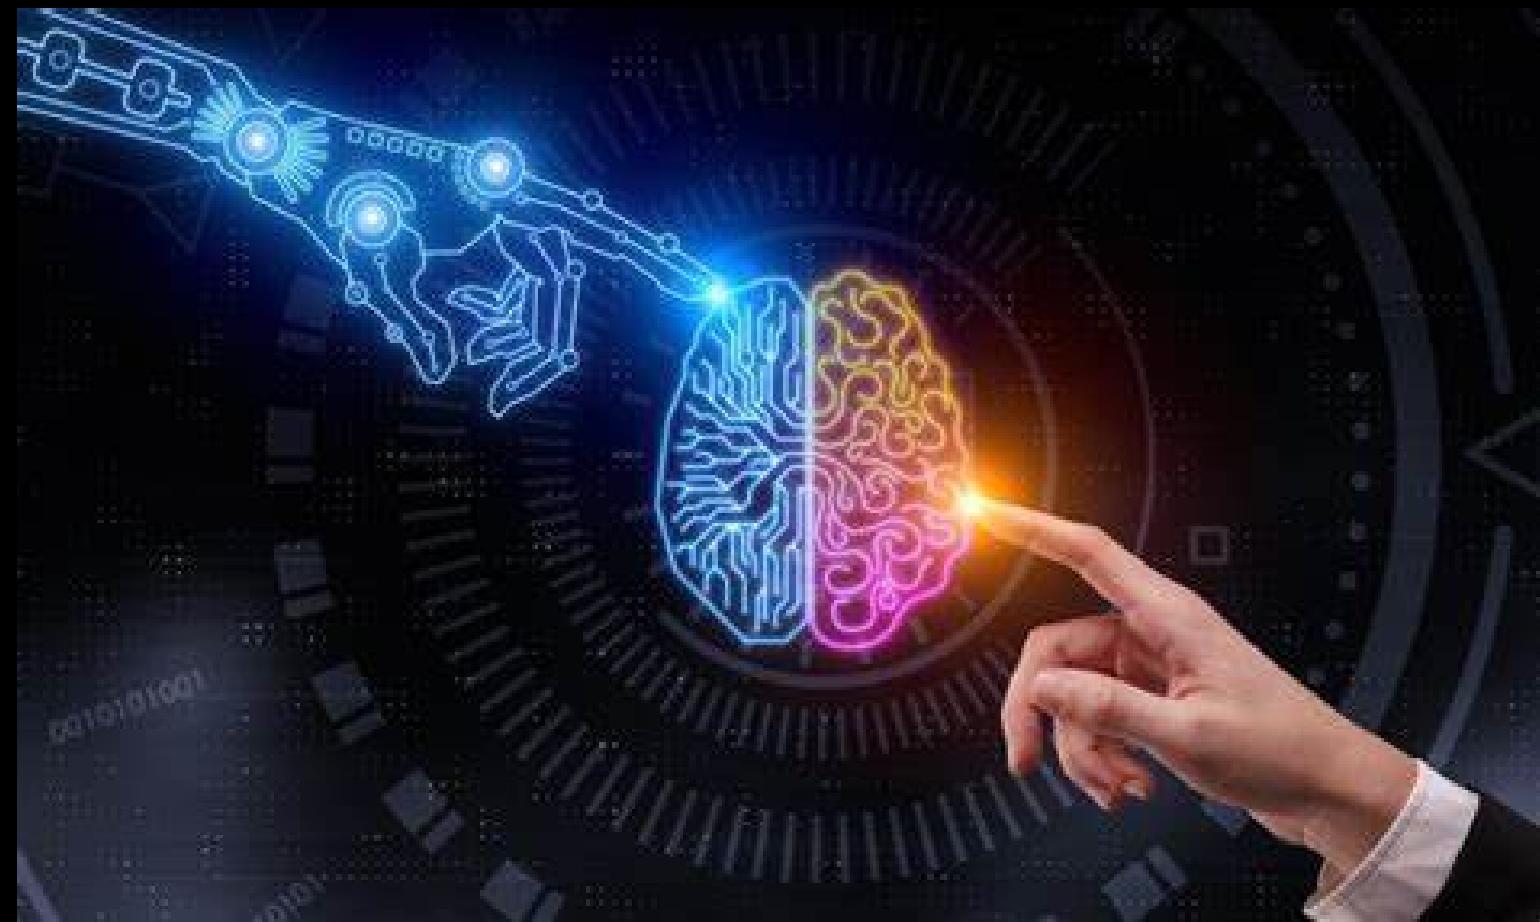

Curenlly is difficulty to finding collaborators for open science projects due to Global Collaboration Barriers and limited Exposure for Researchers and projects

# Development

**LabLink Network relies on advanced Artificial Intelligence techniques and natural language models to accurately identify the compatibility of skills between users and projects.**

Our platform is a highly visible and transparent space for Open Science, giving users the ability to discover collaborative teams that perfectly match their skills and needs. In this way, we foster and facilitate global collaboration on multidisciplinary projects in a highly efficient and effective way.

**What is Open Science?**

Open science is a research and scientific practice that emphasizes transparency, accessibility, and collaboration in the process of conducting and disseminating scientific work. It involves making research methods, data, and findings openly available to fellow researchers and the public.

Overall open science aims to accelerate the pace of scientific discovery, promote innovation, and increase the societal impact of research by removing barriers to access and fostering a culture of collaboration and transparency in the scientific community.

**Key elements of open science**

- Making research publications freely accessible
- Rapidly disseminating research findings
- Ensure research is verifiable
- Encouraging interdisciplinary cooperation
- Adhering to ethical standards
- Sharing research data and tools openly

The screenshot shows the homepage of the LabLink Network website. At the top left is the LabLink Network logo, which is a circular icon featuring a stylized landscape with mountains, water, and laboratory glassware. The top navigation bar includes three tabs: "Marketplace" (highlighted in orange), "About" (in grey), and "Login" (with a user icon). Below the navigation is a large white box containing the following content:

**What is Open Science?**

Open science is a research and scientific practice that emphasizes transparency, accessibility, and collaboration in the process of conducting and disseminating scientific work. It involves making research methods, data, and findings openly available to fellow researchers and the public.

Overall open science aims to accelerate the pace of scientific discovery, promote innovation, and increase the societal impact of research by removing barriers to access and fostering a culture of collaboration and transparency in the scientific community.

**Key elements of open science**

• Making research publications freely accessible	• Encouraging interdisciplinary cooperation
• Rapidly disseminating research findings	• Adhering to ethical standards
• Ensure research is verifiable	• Sharing research data and tools openly

In the center of the white box is a photograph of two people, a man and a woman, sitting at a desk and looking at a laptop computer together. The woman is pointing at the screen. The background of the entire page has a faint watermark of a person working in a lab.

**Marketplace platform  
where users load and  
search for projects of  
their liking depending on  
their ability**

# EXPECTATIONS

**Establish an open-access global hub for researchers and collaborators across every scientific field. Share project information, enabling collaborations from anywhere.**
